Objectives of the Course

1- Understand the physics of the USS machine and which probe should be used for each procedure.
2- Establish your skills to deliver a focused bed-side US study in the unwell patients. Focus on Chest, abdominal and vascular Examination. A new module has been added to the course (**USS guided LP**) as it part of the new FAMUS curriculum.
3- Get your portfolio signed for the first 5-6 scans, so you can get along with the rest of the logbook easily afterwards.
